

# Printing From A Chrome Device

When you print from a Chrome device for the first time, you may need to set your printer. These step-by-step instructions will make printing as easy as 1...2...3!

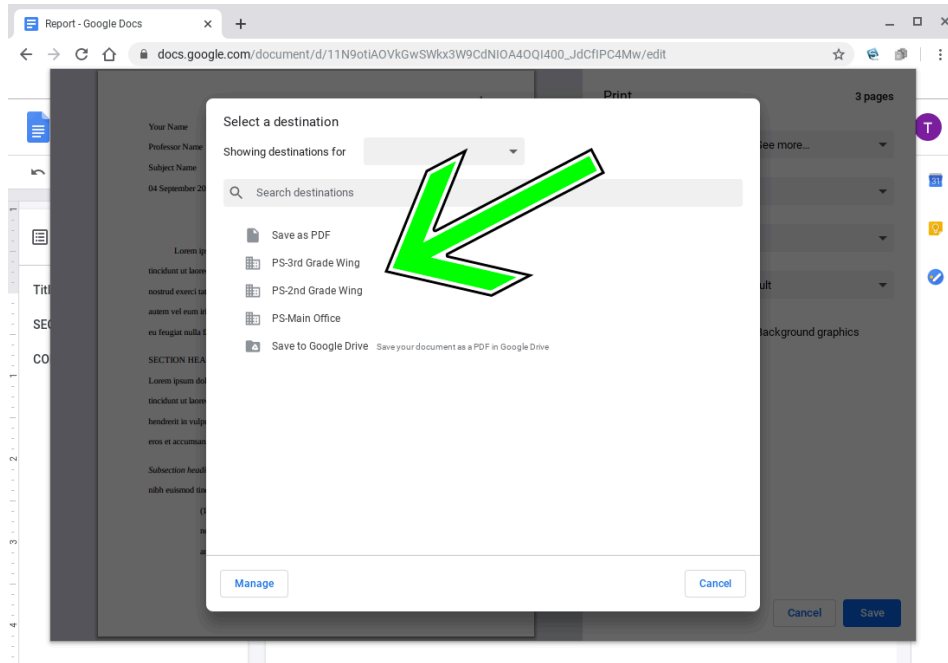

Step 1: Try to print your document.

Step 2: Click the drop-down menu under destination. If you do not immediately see the printer you need, click show more. By default, it will say "Save as PDF".

Step 3: Select your printer. All the printers that are available to you in Google should appear here. If you do not see the printer you need on this screen, please contact Support.

After these steps, you should be printing away. If you have any questions, please email [support@bethalto.org](mailto:support@bethalto.org).
